

# TALOS OPERATIONS

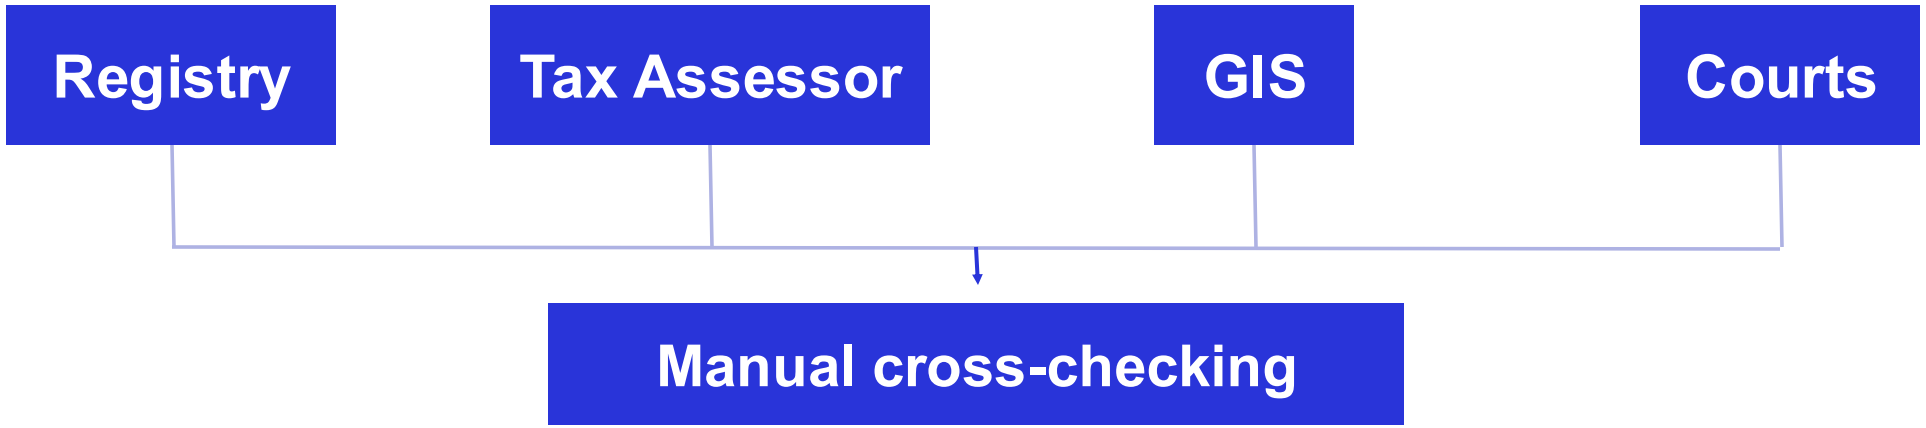

Infrastructure for querying US property records

# A missed easement at closing

> **“We got to the closing table just to find an easement that ran through the middle of the property.”**

Title attorney describing a deal lost after a seven-month sales cycle

# One property. Fragmented records.

Researchers must find the records, reconcile conflicting details, and determine what applies.

# One county, measured

Johnston County, NC

**11%**

of checked parcel-to-deed links conflicted with the listed owner or document type.

**55**

PINs shared by 2+ parcels

**574**

parcels with no PIN

**304**

addressed rows with no county key at all

**1,788**

parcels with no deed reference

Company analysis: 11,616 of 103,659 links.

PIN = parcel identification number.

# Talos connects the records

Live property research with evidence

01 **Property query**

02 **Official records**

03 **Linked evidence**

For anyone doing property diligence, and the AI tools they use, to inspect the underlying records.

# Products and Services

Sold directly today — immediate revenue and market exposure.

### Attorney software

Property research software for attorneys and title professionals

### Investor lists

Curated leads for real estate investors

### Portfolio audits

County-record verification across a portfolio of properties

### Transaction research

Preliminary property diligence

**Each delivery funds and improves the underlying system.**

# Infrastructure

## The bigger play: integrate with the counties themselves

Automated data intake, entity resolution, and linkage across every government office.

## Example: a deed is scanned in

Talos indexes and checks the deed, finds the property, and attaches it to the parcel’s lineage.

## Every office follows

The tax assessor is pinged, and the tax card updates automatically — then GIS, and every other office.

# Competition

## ATTOM / PropStream

Large data aggregators that pull data on a cycle and index it in house to resell.

**Why Talos:** Live data attorneys can use.

## Dono / RealPact

Software companies that provide a service or a workbench.

**Why Talos:** We work underneath, providing the data to Dono/RealPact.

**The competition builds around the issue. We solve it.**

# Go To Market

## Distribution:

Provide software and services for free to law firms, investors and county offices. We get users, feedback and validity.

*Ex: Gave software to the law firm that provides free title clearing work for victims of hurricane Helene. This play also exposes us to their body of volunteer attorneys who will take the tool back to their firms.*

## Trust First:

We are disrupting the space. As feedback continues to validate our goals and we gain trust, we can begin securing enterprise contracts with law firms, real estate investors, and counties.

# The Team

**Elijah Wells** (CEO) **47.5%**

**Ethan Riddle** (CTO) **47.5%**

**Josh Kohn** **5%**

***Elijah and Ethan on peak 21in pursuit of **SB6K***

We all met as fraternity brothers five years ago.

# Raising $250K
